

Alessandro Pozzi

Full Stack .NET Software Engineer

PROFILE

.NET Software Engineer with 4 years of experience developing and maintaining business applications using Microsoft technologies. Experienced across the full software development lifecycle, from requirements analysis to deployment, with strong expertise in designing reliable, maintainable solutions and collaborating directly with customers. Looking for a new opportunity to contribute to challenging projects and continue growing as a software engineer.

WORK EXPERIENCE

■ .NET Software Engineer

Silicon DNA S.A., Bertrange - Luxembourg | Jun 2022 - May 2026

- Designed, developed and maintained enterprise ERP applications using C#, .NET Framework 4.8, .NET, ASP.NET Core and Blazor Server.
- Delivered new business features based on customer requirements and participated in functional analysis sessions to translate business needs into technical solutions.
- Collaborated with leading organizations across Luxembourg's financial sector, including international banks, insurance companies, law firms, and fiduciary service providers.
- Deployed and maintained web applications across IIS, Linux, Nginx and Apache environments.
- Performed code reviews to ensure code quality, maintainability and consistency across the development team.
- Collaborated with a team of six developers using Git and Azure DevOps.
- Key achievements:
 - Designed and implemented the XML backup & restore engine for customer data.
 - Deployed and administered a self-hosted Vaultwarden instance on Linux, providing secure password management for the company.
 - Developed a new Excel export module using NPOI.
 - Initiated the migration of the legacy WinForms application to Blazor Server by designing and developing the initial proof of concept that established the project's technical foundation.
- Mentored and trained a new developer during a one-month knowledge transfer period.

■ R&D Trainee

C-Services, Capellen - Luxembourg | Feb 2019 - May 2019

- Evaluated the adoption of .NET Core for enterprise software by developing prototypes and assessing its readiness for large-scale industrial projects.

SKILLS

Programming Languages

C# SQL JavaScript
TypeScript VB.NET Java

Framework & Technologies

.NET ASP.NET Core
Blazor Server WPF WinForms
Entity Framework Core React
.NET Framework 4.8

Tools

Git Azure DevOps Visual Studio
SSMS AI Agents

Infrastructure & Databases

SQL Server IIS Linux Nginx
Apache Virtual machines

Data format

XML JSON

Languages

French - Fluent English - B2

PERSONAL PROJECTS

React website - <https://react-my-website-resume.vercel.app/>

Built a personal portfolio website with React and TypeScript, featuring project showcases and an AI-powered chatbot for interactive profile exploration.

.NET 10 Microservices — Weather Alert Platform

Designed and developed a .NET 10 microservices platform for managing weather alerts. The application consists of independent Weather, Alert, and Notification services communicating through REST APIs and asynchronous messaging with RabbitMQ. The entire environment is containerized using Docker and Docker Compose, with PostgreSQL and Entity Framework Core for data persistence.

End-to-End CI/CD Pipeline for a .NET Minimal API

Developed and deployed a .NET Minimal REST API with a fully automated Azure DevOps CI/CD pipeline. Created reusable YAML-based multi-stage pipelines to restore NuGet packages, build the application, execute automated tests, publish build artifacts, and deploy seamlessly across Test and Production environments, following modern DevOps best practices.

EDUCATION

■ Master's degree in Computer Science (with Honours)

UNamur, Namur - Belgium | Sep 2019 - Jan 2022

- Advanced studies in software engineering, algorithms, databases, computer networks, artificial intelligence, and information systems, with a strong emphasis on analytical thinking, software development, and problem-solving.
- Key achievements:
 - Developed a Java interpreter with ANTLR for translating a custom language into robot control commands, leveraging the Visitor pattern for syntax and semantic analysis.
 - Built a React-based web application for home renovation management using Agile (Scrum), .NET Core, T-SQL, and Microsoft Azure.
 - Implemented an AI-powered version of the Quoridor strategy game using JavaScript and Prolog, applying depth-first search algorithms to optimize gameplay decisions.

Software engineering

AI models

Algorithms

Analysis

■ Bachelor's degree in Business Informatics

Hénallux, Namur - Belgium | Sep 2015 - Jun 2019

- Designing and creating ICT programs with the new technologies (Web, mobile, Cloud,...).
- Key achievements:
 - Developed a cross-platform application for the Red Cross, featuring an Angular web interface, a native Android application in Java, and a .NET Core backend with a T-SQL database.

Web, software and mobile development
